

Memora Database Schema Documentation

1. Users Collection

Stores user accounts, profiles, and roles.

Field	Type	Required	Description / Constraints
name	String	Yes	Full name of the user
email	String	Yes	Unique email address
password	String	No	Hashed password (empty if OAuth)
image	String	No	Avatar URL
role	Enum	Yes	Admin or User (default: user)

2. Events Collection

Stores events created by users for uploading media.

Field	Type	Required	Description / Constraints
name	String	Yes	Name of the event (Text Indexed)
description	String	No	Detailed description (Text Indexed)
coverImage	String	No	S3 URL for event cover
date	Date	Yes	Date of the event
location	String	No	Physical or virtual location
visibility	Enum	Yes	public or private
category	String	Yes	Category tag (e.g., Wedding)
created_by	ObjectId	Yes	Ref to Users collection
members	Array[ObjectId]	No	Ref to Users (for private events)

3. Media Collection

Stores photos/videos uploaded directly to AWS S3.

Field	Type	Required	Description / Constraints
eventId	ObjectId	Yes	Ref to Events collection
uploadedBy	ObjectId	Yes	Ref to Users collection
fileUrl	String	Yes	Final AWS S3 Object URL
thumbnailUrl	String	No	Compressed preview URL
type	Enum	Yes	image or video

Memora Database Schema Documentation

s3Key	String	Yes	Raw AWS S3 Key for deletions
aiTags	Array[String]	No	Labels from Google Vision API
likes	Array[ObjectId]	No	Users who liked this media
favouritedBy	Array[ObjectId]	No	Users who favourited this
downloadCount	Number	No	Number of times downloaded

4. FaceMatch Collection

Maps detected faces in Media to enrolled Users via AWS Rekognition.

Field	Type	Required	Description / Constraints
mediaId	ObjectId	Yes	Ref to Media collection
userId	ObjectId	Yes	Ref to Users collection (matched person)
rekognitionFaceId	String	Yes	Face ID mapped from AWS
confidence	Number	Yes	Similarity score percentage (e.g. 98.5)
boundingBox	Object	No	Coords of face in image (Top, Left, W, H)

5. Comments Collection

Stores user comments on specific Media items.

Field	Type	Required	Description / Constraints
mediaId	ObjectId	Yes	Ref to Media collection
userId	ObjectId	Yes	Ref to Users collection
content	String	Yes	The text content of the comment
taggedUsers	Array[ObjectId]	No	Users tagged via @mention

6. Notifications Collection

Stores in-app alerts for real-time Pusher delivery.

Field	Type	Required	Description / Constraints
recipientId	ObjectId	Yes	User receiving the notification
actorId	ObjectId	Yes	User who triggered it (e.g. liker)
type	Enum	Yes	like, comment, face_match, invite
entityId	ObjectId	No	ID of related media/event

Memora Database Schema Documentation

entityType	Enum	No	media, event, user
isRead	Boolean	Yes	Whether user has seen it (default false)
